

## Dump Bin Adjustable Sleeve Set Up

Each ENTECCO dump bin comes with two adjustable sleeve kits that are used to accommodate uneven floors. This operation should only need to take place once.

1. Each kit consists of a 20" adjustable sleeve, O-Ring, clamp, and pin.
2. Place the O-Ring on the sleeve. Loosen the screw on the clamp and set it around the collar on the dump bin.
3. Slide the sleeve into the sleeve on the top of the dump bin. Adjust the height using the O-Ring. Line up the top of the sleeve with the collar coming down from the hopper.
4. Lock the clamp over the rolled lip and O-Ring. Place the pin in place on the clamp. Slide the dump bin under the hopper and use another clamp to seal it to the hopper
